RIYAZ SHAIK

SOC Analyst L1 | Associate Cybersecurity Analyst | Immediate Joiner

+91 6281446962 riyazshaikplvd@gmail.com LinkedIn GitHub Portfolio Tirupati, AP

Career Objective

Motivated and detail-oriented SOC L1 Analyst and Cybersecurity enthusiast with a **Bachelor of Technology in Computer Science Engineering (Data Science, 2025)**. Currently pursuing CompTIA Security+ with strong foundational knowledge in **SOC operations, SIEM monitoring, incident response, threat detection, Windows Event Logs, phishing analysis, malware analysis, network traffic analysis, log analysis, vulnerability assessment,** and **security frameworks**. Experienced through real-world labs on **TryHackMe**, **LetsDefend**, **Hack The Box**, internships, hackathons, and adversary simulation projects.

Work Experience

Cyber Security Intern (Training Program) **(October 2025 - December 2025)**

SkillsUprise

- Monitored and analyzed 50+ daily SIEM alerts using Splunk/Wazuh; investigated Windows Event Logs and Linux syslogs to detect, triage, and escalate security incidents.
- Collaborated with team members to identify false positives and escalate true positives for timely incident escalation.
- Contributed to the maintenance and tuning of SOC tools and security monitoring infrastructure to ensure optimal alert detection, service availability and performance.
- Configured and integrated log sources into SIEM tools to enable real-time application monitoring.
- Tested and fine-tuned SIEM correlation rules to minimize false positives.
- Assisted in conducting risk assessments, audits, and supported external audits related to information security compliance.
- Assessed vendor information security posture, identified security gaps and risks, and recommended mitigation strategies.
- Followed incident response lifecycle (Detection → Investigation → Response → Closure)

Technical Skills

- **Industry Standards & Frameworks:** MITRE ATT&CK, OWASP Top 10, ISO 27001, Cyber Kill Chain, Pyramid of Pain, Diamond Model of Intrusion Analysis, SOAR
- **SIEM & Log Management:** Splunk, Microsoft Sentinel (KQL), Wazuh, ELK Stack
- **Vulnerability Management:** Nessus, Nmap, Zenmap, Burp Suite, Metasploit
- **Network Security:** Wireshark, tcpdump, Network Traffic Analysis, IDS/IPS (Snort/Suricata), TCP/IP, OSI Model, Firewall Log Analysis, DDoS Attacks
- **Endpoint & Email Security**: Microsoft Defender for Endpoint, SentinelOne, CrowdStrike, EDR, LimaCharlie, XDR, Sysmon, Windows Process Monitoring
- **Cloud Technology:** AWS, Microsoft 365, Google Workspace
- **Threat Intelligence**: Threat Intelligence, Threat Hunting, MISP, YARA Rules, Sigma Rules, Detection Engineering
- **Programming & Scripting:** Python, Bash, PowerShell, SQL
- **Operating Systems:** Windows (10, 11), Linux (Ubuntu), VMware
- **Identity & Access:** Active Directory (AD) Fundamentals, Windows Domain
- **Digital Forensics:** FTK Imager (Disk Imaging & Evidence Collection), Windows Forensics (Registry Analysis, Shellbag Analysis), Log Investigation
- **Hands-on Labs:** TryHackMe, LetsDefend, Hack The Box

Education

Bachelor of Technology (B.Tech) **(2021 - 2025)**

Computer Science Engineering (Data Science)

Sri Venkateswara College of Engineering and Technology (SVCET), Chittoor, A.P

CGPA: 8.66

Intermediate - MPC **(2019 - 2021)**

Narayana Junior College, Pulivendula

Grade: A – (802/1000)

SSC **(2018 - 2019)**
ZPH School, Velindandla
CGPA: 9.8 / 10

Training & Certifications

- CompTIA Security+ - Pursuing
- Certified SOC Analyst – Cyber Guide (Bangalore) Certificate
- Ethical Hacking & Cybersecurity CEH V13 – SkillsUprise (Vizag) Certificate
- Pre Security – TryHackMe Certificate
- Cybersecurity & Ethical Hacking – Infosys Springboard Certificate
- Python Full Stack Development – Infosys Foundation Certificate
- Splunk Engineer (Skill Badge) – LetsDefend – Dec 2025 Certificate
- VirusTotal for SOC Analyst (Skill Badge) – LetsDefend – Jan 2026 Certificate
- TryHackMe Top 10 % - LetsDefend Top 15%

Projects & Labs

- **Virtual SOC with Real-Time Threat Detection – Cyber Guide**

  Built a virtual SOC environment using ELK Stack/Wazuh for real-time threat detection and log analysis on Ubuntu to monitor and analyze security events from Windows and Linux endpoints through centralized SIEM dashboards. Created 15+ detection rules and Sigma Rules for brute-force attacks, privilege escalation, and port-scanning activities, mapped to MITRE ATT&CK framework and Cyber Kill Chain stages. Monitored Active Directory events for suspicious login patterns and unauthorized access attempts using Windows Event Logs and PowerShell log analysis, and conducted phishing and web attack analysis using threat intelligence tools. Simulated real-world attacks using Kali Linux and Metasploit to validate alert generation and detection capabilities, and performed network traffic analysis using Wireshark. Performed alert triage, incident investigation, incident escalation, and security reporting to simulate real SOC analyst workflows. GitHub

- **OWASP Top 10 Lab Series**

  Exploited 8 OWASP Top 10 vulnerabilities (XSS, SQLi, Brute Force, Command Injection, File Upload, CSRF, File Inclusion, Broken Auth) using Burp Suite and DVWA across all difficulty levels. • Documented attack payloads, exploitation steps, and secure code fixes for each vulnerability type. GitHub

- **Deep Fake Source Identifier –B.Tech Final Year**

  Built an NLP-based deep learning system using Python, PHP, and MySQL to detect AI-generated (deepfake) and bot-driven content on social media, supporting misinformation detection and security threat analysis. GitHub

- **Threat Detection & Incident Response Lab – TryHackMe**

  Detected and analyzed 30+ simulated attacks using Splunk Dashboards. Completed "SOC Level 1 Analyst Path" covering real-world alert triage, SIEM dashboards, Windows Event Log analysis, network traffic analysis, phishing analysis, malware analysis, and incident escalation. GitHub

- **Malware Simulation Lab – SkillsUprise Hackathon**

  Designed and analyzed ethical malware simulations to understand how attackers exploit malicious links, clickjacking, remote command execution, and data exfiltration. Built secure, audited C2 workflows and multi-device monitoring tools, translating attacker techniques into SOC-ready detection, logging, and incident response insights. GitHub

- **Cloud Security Mini Project**

  Implemented Microsoft Defender for Cloud to monitor endpoints, configure security policies, analyze threat alerts, and generate security reports for enhanced EDR coverage. GitHub
